FDD Abstract of [REDACTED]

WIRE MESH STANDARDS DIN 1170 AND DIN 1171
25X1X

(3pp; [REDACTED])

[REDACTED]

The term DIN (Deutsche Industrie Normen - German Industrial Norms) refers to the set German industrial standards which have been drawn up in the past to facilitate the standardization of all phases of German industry.

This document of three printed pages indicates the specifications for DIN 1170, perforated-metal sieves, and for DIN 1171, woven flat-wire mesh sieves, both used in the testing of certain materials. DIN 1170, one page, is dated December 1939; DIN 1171, two pages, is dated March 1934. The second page of DIN 1171 contains detailed instructions for testing the wire mesh to see that it conforms to given standards.
